#### TBRI Tip of the Month

#### The Importance of Mindfulness

"At-risk adopted children may appear to be a certain age physically, but inside they are playing catch-upemotionally, behaviorally, and developmentally." -- Dr. Karyn Purvis

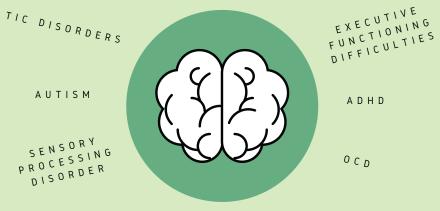

- Mindfulness Strategies involve caregivers becoming acutely aware of what thoughts, beliefs and behaviors they bring to interactions, and how those might influence ongoing relationships. A mindful adult will know his/her own emotional triggers and will possess the ability to self-regulate in order to remain "in the moment."
- Mindful adults are often able to maintain a calm presence in order to more effectively co-regulate a child; they are also more often able to be flexible in responding to negative behaviors, and they are able to be creative in problem-solving (using authoritative rather than authoritarian parenting tactics).
- Mindfulness is possible in both securely attached adults as well as those with insecure attachment styles! Developing increased mindfulness can help lead to becoming "Earned Secure," which means being able to tell your story with fierce honesty, but then let it go.
